COURSE DESCRIPTION

The daily battle for the practicing radiologist is how to stay current and up to date on emerging techniques and technologies, while maintaining high-quality clinical practices in a time of limited resources. The 36th offering of our annual, postgraduate course that emphasizes clinical MRI and CT of the entire body is designed for practitioners using MRI and multi-detector CT. The basic format of the course is didactic lecture style, with daily case-based sessions, and opportunities for question and answers. The first two days of the course review emergency radiology, chest, abdomen, pelvis, cardiovascular, and breast imaging. The final two and a half days cover musculoskeletal radiology, neuroradiology, and head and neck imaging. The curriculum is directed toward the practicing radiologist, with emphasis on the translation of advanced techniques and technologies to the clinical domain.

OBJECTIVES

Upon completion of this activity, participants will be able to:

- Demonstrate knowledge of the latest MRI and CT techniques spanning all segments of the body.
- Appropriately utilize emerging MRI and CT techniques, many of which will be directly applicable in the clinic.
- Perform and interpret modern CT and MRI examinations.
- Utilize quality and safety programs related to medical imaging including CT radiation dose, MR safety, and contrast agents.

WHO SHOULD ATTEND

This course is geared primarily for physicians who are practicing radiology or have an interest in the radiological sciences as well as Medical Physicists interested in CT or MR.
