COURSE DESCRIPTION

As both new technologies and clinical applications evolve rapidly, practitioners in the field of Nuclear Medicine may not be up-to-date with new information. The objective of the course is to review established clinical applications as well as new and emerging ones within the specialty of nuclear medicine. Using lectures on various topics in this field as well as case-based studies with interactive audience participation, the participants will be engaged in reviewing and learning established and new clinical indications, findings, interpretations and technology innovations. In addition, physicians will be given an opportunity to work towards their Maintenance of Certification by taking Self-Assessment Modules (SAM). We are planning 10 SAM modules. Technologists may work towards CE credits.

WHO SHOULD ATTEND

This course is directed to nuclear medicine physicians, radiologists practicing nuclear medicine, fellows, resident medical students and technologists.

OBJECTIVES

Upon completion of this course, participants will be able to:

- Immediately apply newly-acquired competencies to the selection, implementation and interpretation of nuclear medicine studies
- Increase diagnostic accuracy utilizing various nuclear medicine applications
- Develop treatment plans tailored to individual patient profiles. Improve overall disease management and patient outcomes by introducing state-of-the-art techniques into clinical practice
